

Data Synergy Remote Desktop Launcher

Overview

The Remote Desktop Launcher provides an internet protocol handler for the RDP:// protocol. This may be installed on end-user workstations. The software allows the user to conveniently launch the Microsoft Terminal Services Client tool (MSTSC) from a suitably encoded HTTP page hyperlink.

For instance the following link would launch a remote desktop session to a computer called OfficePC:

```
<a href='rdp://officepc.yourdomain.com'>Open OfficePC</a>
```

Remote Desktop Launcher provides browser independent protocol translation to support the following browsers:

- Microsoft Internet Explorer
- Google Chrome
- Mozilla Firefox

Remote Desktop Launcher is suitable for use on both x86 and x64 based systems running Windows 2000 and later.

WakeMAN Server Configuration

The Remote Desktop Launcher installs a generic protocol handler. To configure Data Synergy WakeMAN server to use the handler configure the **WakeConnectURL** setting to: **rdp://\$computername\$.fqdomainsuffix\$**

Remote Desktop Launcher Utility

About Data Synergy

Data Synergy is a British company based in Sheffield. We have over 10 years' experience developing and supporting software solutions for enterprise PC deployment and management. We do not resell other vendors' products and do all of our development, sales and support from our UK base.

Our products have evolved through listening to customer ideas and applying our unrivalled knowledge of PC internals. If you have a suggestion for a new product or feature we would love to talk to you.
